

MECHANICAL DESIGN ENGINEER – NEW PRODUCT DEVELOPMENT CONSULTANT – UK

Can you get you sleeves rolled up?

Can you build tangible prototypes in addition to building client relationships?

Do you love to be “hands on” but also have the ability to mentor and delegate on a variety of technically challenging projects.

Can you make working models in addition to designing them on a computer or drafting the technical drawings?

Could you build a test rig and put your prototype through its paces!

If you are nodding like crazy then we have a very exciting opportunity on offer which could be tailor made for you!

Ideally you should have a first class academic record backed up by some industrial experience, prizes and awards and or an impressive design portfolio covering concept generation, mechanism design, materials selection and analysis, dynamics analysis using specialist applications such as ANSYS and last but not least design models for high and low volume manufacturing using 3D CAD, rapid prototyping, Solidworks etc...

If you are still here then here comes the really exciting bit.

You will be involved in all stages of life cycle projects from early concept to market delivery, you will be able to take ownership over large scale projects working with clients across many different industry sectors through consumer goods to specialist instruments sensors and devices. You do need to have a passion for new technology and development but there will never be a dull moment at this technologically advanced product design and development consultancy.

Keen to get your hands dirty? Call us now or send your CV today.

Excellent salary and career prospects

Based Cambridge, UK
